

The sharpe BEAK EDGE cuts keenly into concrete

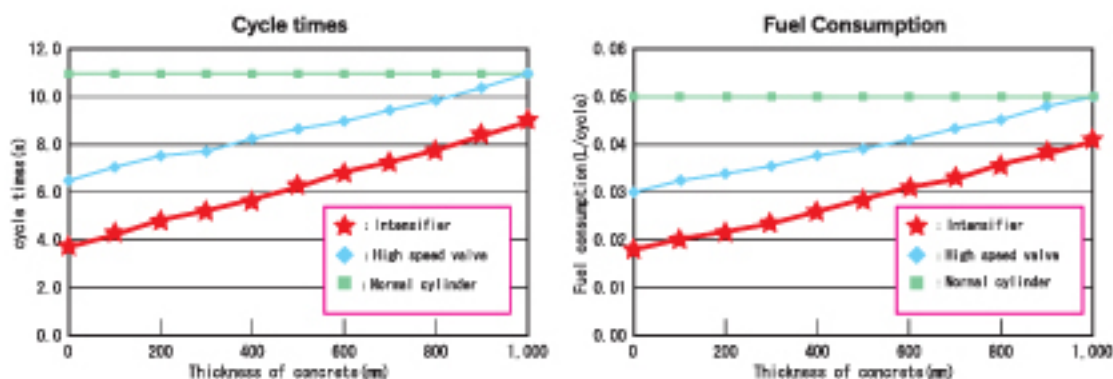

Furthermore, a semicircle-shaped intermediate blade transmits power into the concrete at any given angle and creates a crack

The wedge-shaped design of the blade arm then breaks the concrete lengthwise

NPK's exclusive Intensifier System provides for maximum crushing force and the fastest cycle times.

Remarks: 1. Compared at 200L/min of oil flow
2. Values are theoretical and may differ from actual situation.

This unique arm shape in conjunction with the Intensifier System creates a dual effect which increases both work efficiency and energy savings
