

May 21, 2020

Dear Customer

Thank you very much for your continuous patronage and support.

This letter is to announce that NPK will start manufacturing our air tools without paint in 2020.

NPK tools have been painted in the blue green color for a long time. Facing tightened industry regulations and growing environmental concerns, we concluded it was the time to make a change.

**[Tool housing]**

The aluminum casting parts will be shot blast finish with Alodine treatment.

The steel parts will be black-oxidized.

**[Guard for grinder]**

Cationic coating will apply to the guards for anti-corrosion.

Performance of the tools will not change by this change.

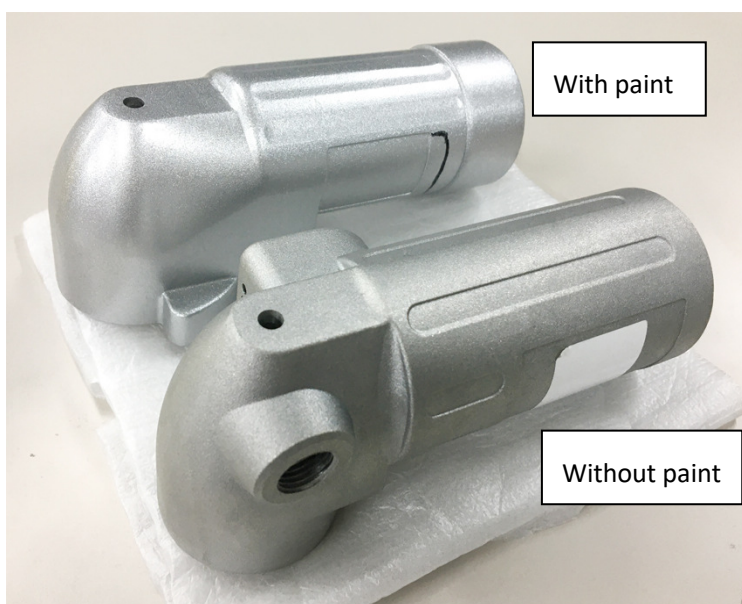

To differentiate the tools without paint from the previous tools, we will alter the serial numbers.

Previous tools: SN 01234567 starting from 1

New tools: SN 02000000 starting from 2

NPK will start making the tools without paint from May 2020.

For your opinions or questions, feel free to contact us.
